Spider Veins

Small blue and red vessels visible within the skin of legs, face or chest.

Varicose Veins

Dilated and tortuous vessels under the skin that can produce cosmetic complaints to severe symptoms.

Chronic Venous Stasis

An advanced stage of venous disease. Symptoms are leg swelling, dark discoloration of the skin and ulcerations in the affected leg.

Face Veins

Spider veins in the face are very common, and produce serious cosmetic problems.

Hand Veins

Visible veins in the hand. Normal in most people. When prominent and ugly, they can be eliminated.

REQUEST A CONSULTATION

Our office will contact you within 24 hours. Thank you for your inquiry.

Over 80 million Americans suffer from easily treatable diseases of the veins and arteries.

Unightly varicose and hand veins, spider veins in the face and legs, and chronic venous stasis cause embarrassment at the very least. They can also cause serious discomfort and inconvenience: fatigue, heaviness, aching, itching and burning, throbbing, cramping and restlessness—sometimes even with no change in appearance. Worse still, venous disorders can lead to more serious medical issues like dermatitis, inflammation, and bleeding or ulcerated skin. Worst of all, they may indicate other, potentially disfiguring and even life threatening conditions.

For more than 40 years, Dr. Harry Schanzer and New York Vascular-Laser Center have

Over 80 million Americans suffer from easily treatable diseases of the veins and arteries.

Unsightly varicose and hand veins, spider veins in the face and legs, and chronic venous stasis cause embarrassment at the very least. They can also cause serious discomfort and inconvenience: fatigue, heaviness, aching, itching and burning, throbbing, cramping and restlessness—sometimes even with no change in appearance. Worse still, venous disorders can lead to more serious medical issues like dermatitis, inflammation, and bleeding or ulcerated skin. Worst of all, they may indicate other, potentially disfiguring and even life threatening conditions.

For more than 40 years, Dr. Harry Schanzer and New York Vascular-Laser Center have treated people effectively for diseases of the veins and arteries.

A distinguished physician with leadership experience in New York's most prestigious hospitals, Dr. Schanzer devotes his practice to the most advanced, effective treatments to alleviate the needless shame, discomfort and health consequences of varicose veins and other vascular disease. Sclerotherapy, microphlebectomy, electrothermal coagulation, laser and radio frequency treatments are safe, simple, outpatient procedures that prove effective for the vast majority of New York Vascular-Laser patients. Dr. Schanzer's own research and inventions have directly helped refine such therapies over the years. And for cases requiring serious operation, he is a master surgeon with 40 years of experience.

“...Thank you for the wonderful job you did on my vein ablation. The procedure was completely successful in stopping the pooling of blood in my foot. The discomfort was virtually non-existent and, very importantly from the patient's standpoint, the procedure and the healing progresses exactly as you had said they would....”

-James S, Upper West Side
